Application of Whole Management Concept of Body and Mind in the Treatment of Malignant Tumor Patients XU Ling

(Yueyang Hospital of Integrated Traditional Chinese and Western Medicine, Shanghai University of Traditional Chinese Medicine, Shanghai, 200437)

ABSTRACT As a kind of new concept and treatment strategy, the whole management (WM) emphasizes multidisciplinary collaboration from diagnosis to the rehabilitation process on the basis of standardized diagnosis and treatment, and helps patients to better fight against disease from treatment, physical recovery, psychological recovery and diet conditioning. The characteristic of traditional Chinese medicine (TCM) in treating malignant tumor is “preventive treatment before disease and controlling development of existing disease”. Besides medical therapy, the treatment methods also include non-drug therapy of emotional, diet, acupuncture, guiding, musical therapy, which is a comprehensive treatment of physical and mental adjustment. At the same time, according to the theory of different stages with different strategies, we build the clinical scientific research integration platform which bases on ideal world of clinical trial and the real world of clinical diagnosis and treatment, so as to establish the “six in one” mind and body management system of prevention, diagnosis, treatment, nursing, follow-up and rehabilitation.

Keywords malignant tumors; whole management; comprehensive treatment, clinical scientific research integration
